

# Technical Requirements and Architecture

## Architecture

- Performer Suite is a .NET based program that is installed on Microsoft Windows.
- No administration rights are required and no entries are made in the Windows Registry.
- Despite a few custom function modules, which can be created automatically by the Performer Suite, no adaptations or installations are required in your SAP system.
- To save synchronized objects, data and comments an SQLite-, SQL Server or Oracle database can be used.
- When conducting an analysis function or documentation, Performer Suite communicates via remote-enabled function modules (BW) or the RestFul interface (BO and HANA) with your SAP systems.
- The result is displayed in the form of an analysis or documentation (Output formats: Word, Excel, PPT, PDF, HTML).

## Technical Requirements

The following system requirements and installed software are required on the client system in order to use the Docu Performer:

- 2 GHz CPU, 4 GB RAM
- [Microsoft .NET Framework 4.6.1 or higher](#)
- Open Office or Microsoft Office (Version must be 2002/2003 or higher (with installed Compatibility Pack for Open XML formats))
- Installed SAP GUI or [their related library DLL files](#)
- In the case of an SQL-Server installation: SQL Server 2005 (9.0) or higher
- In the case of an Oracle installation: Oracle 10g or higher
- **64-bit** (& 32-bit): Windows 10 / Windows 7 / Windows 8.1 / Windows 8
- **64-bit** (& 32-bit): Server 2016 / Server 2012 / Server 2012 R2 / Server 2008 R2
- Note: Installing the software does not require administrator permission.

When using the commenting function of the Docu Performer it is recommended to use an SQL Server or Oracle as a database.
