PERFORMER SUITE

We automated technical SAP documentation.

You're welcome.

With the Docu Performer, Technical Documentation finally Pays Off

The Docu Performer is the market-leading software for the automated documentation of your SAP Business Analytics. Only with his help is technical documentation really worthwhile: He makes it available at the push of a button and saves manual effort - fully automatically overnight, if you wish. And it is profitable within a very short time. Loss of knowledge is a thing of the past and you always stay on top of things.

” *Through the daily use of the Docu Performer within the IT department we save valuable working time in day-to-day business and can concentrate more strongly and effectively on our core tasks in BI.*

Patrik Keller, Head of Analytics and Planning, Central IT
Villeroy & Boch AG

Secure & Keep Knowledge up to Date

- Comment objects with technical information and professional knowledge
- Automatic testing of the comment actuality
- Optional ad-hoc object documentation

Several Systems, one Standard

- Bundle coherent BW, BO, HANA, BPC or SAC objects of a project or data model structured & in one document across systems
- Provide consistency, clarity and searchability

Never Outdated & Centrally Available

- Choose the level of detail for different target groups, MS Office format & location for central provision (e.g. Sharepoint)
- Set the desired time at which the documentation is automatically updated - e.g. overnight

The Guide to Your Data Jungle

Analyses & Housekeeping

If Anyone Knows What's Going on, it's the System Scout

In large companies, Business Intelligence can sometimes become a jungle: Diverse systems that have grown over the years and a confusing number of different objects, that are all somehow interwoven. The System Scout is the most competent software for the efficient analysis and maintenance of your SAP Business Analytics landscape. With his help, you can easily maintain an overview of your BW, BO, BPC, HANA and SAC metadata, handle housekeeping effortlessly and can reliably estimate the effects of changes.

” *For the upgrade of our SAP BW 7.0 system landscape to version 7.5 with simultaneous migration to SAP HANA, we introduced the System Scout to make our work easier during the preparations. It has more than fulfilled the expectations placed in it! The analysis in particular has considerably reduced our workload in examining the historically grown systems.*

Markus Ungermann, Inhouse Consultant BI/DWH
Detecon International GmbH

“

Overview the Entire BI

- From BO report to data source: Visualize complex data flows of entire applications and data models
- Trace the mapping of objects along the data flow (Data Lineage)
- Cross-system object comparison

Dependency Analyses

- For example, for the reliable assessment of consequences before technical changes
- System wide code scans (ABAP, SQL script)
- Cross system Where-used lists

Effortless SAP Housekeeping

- List objects, such as query elements, from transport requests, to check naming conventions
- Cross system inventory of numerous object types
- Identify when objects were last called or loaded to clean up

SYSTEM SCOUT

BW/4HANA

BW

Beam me up, Scotty!

Break the record for moving to BW/4HANA.

Get to Know your Strongest Moving Helper - the Migration Booster

The Migration Booster is the most useful and efficient software for supporting SAP BW/4HANA migration projects using a greenfield or brownfield approach. He revolutionizes migration by allowing the automated mass renaming of objects during the system migration and by taking this renaming into account right down to the reporting elements. At the same time he remains highly user-friendly. This is how your migration project is much faster and saves you money.

Collect Objects Conveniently

- Easy collection of the InfoProviders that are to be migrated using the graphical data model
- Very convenient: Automatic collection of dependent PartProviders and InfoObjects

Conversion at the Touch of a Button

- Type conversion to BW/4HANA or BWonHANA optimized objects
- For order in the new system: Mass transfer to new namespaces
- Remodeling: Change object properties on the fly

Fast Export Including Existing Queries

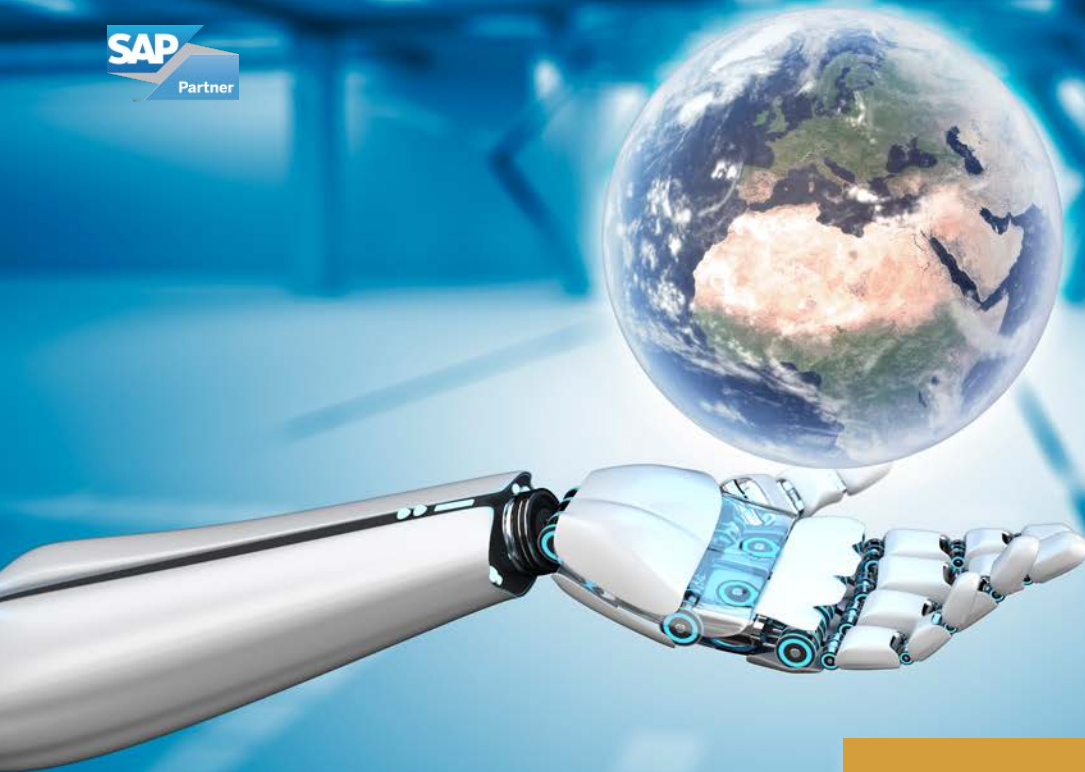

- Export of the adjusted objects to new SAP system
- Faster usage: Copy existing Queries to new InfoProviders & rename contained reporting elements

MIGRATION BOOSTER

Internationalize your BW system

Your communication is on the woodway?

No surprise if the SAP system has only been maintained in one language. For example, the developer in India has to decipher the German object description in the SAP system or a local Hungarian IT department might find themselves struggling to cooperate with the Spanish headquarters. This makes cooperation much more difficult and slows down effectiveness. But translating each description manually takes forever.

The Translation Steward is the most user-friendly and fastest software for the international alignment of your SAP BW system. He translates object descriptions automatically and intelligently into every available language of your BW system. Language barriers in multinational companies are thus a thing of the past.

Clearly Arranged Inventory

- Display descriptions in all available languages of the BW system and dependent objects
- Check where translations are missing or need to be adapted

Comfortable Translation Outside BW

- Instantly translate individual missing descriptions manually
- For mass translation: Integrate all object descriptions in a dictionary, export them to a clearly structured Excel document & pass them on to the translation agency

Transfer to BW at the Push of a Button

- Intelligent dictionary ensures that translations are suggested for object descriptions from now on
- Transfer newly translated object descriptions to the SAP BW system with a click and, if necessary, write them to a transport request
